

Serverless App with AWS Lambda, SQS and DynamoDB

AWS Lambda is a serverless, event-driven compute service that lets you run code for virtually any type of application or backend service without Servers.

Use Lambda Function to Process data From any Data Collection services (SQS/Kinesis/IoT Core).

Write a AWS Lambda function that triggers on data arrival in SQS/ Kinesis/ IoT Core and write the data to DynamoDB table

Deliverables

1. List own the steps you have performed
2. Show the Screenshots of each step in pdf format.
